4. Monitoring Pages
5. Dispatch Log
6. Customers
7. Management
8. Audit Log
9. Backups (Super Admin Only)
10. Frequently Asked Questions

1. Overview

The **Dispatch Monitoring System** helps track installations, repairs, and client concerns. It lets administrators monitor dispatches, track technician and team performance, manage customers and staff, and review system activity.

Role	Access
Super Admin	Full access, including backups and permanent deletion
CSR Admin	Can manage dispatches and customers, but cannot delete records or access backups

2. Getting Started

1. Open the system in your browser and sign in with your email and password.
2. If no account exists yet, you'll be prompted to create the **Super Admin** account the first time you open the system.
3. After logging in, you'll land on the Dashboard.

3. Dashboard

The Dashboard shows an overview of your dispatch operations. At the top bar you'll see a **live clock** showing the current date and time (realtime updates).

- **Export button** — Downloads dashboard statistics as an Excel file. The export also respects whichever donut chart view (All / Internet Install / Signal Play / Client Concerns) is currently selected.
- **Refresh button** — Reloads all dashboard data

Date Filter

At the top, use the **Date Range Picker** to filter data:

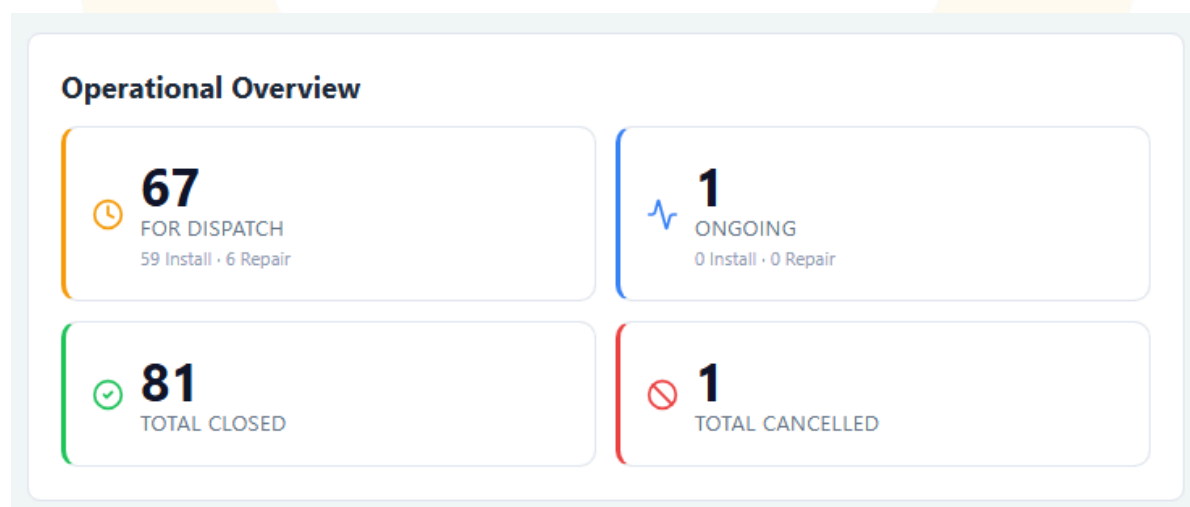

Option	What It Does
All Records	Shows all data (no date restriction)
Today	Shows only today's records
This Month	Shows records from the 1st to last day of current month
Custom Range	Pick a specific start and end date

Dashboard Sections

The sections below are listed in the order they now appear on the page — Operational Overview comes first, followed by Overview (KPIs + donut chart).

1. Operational Overview (Colored Cards)

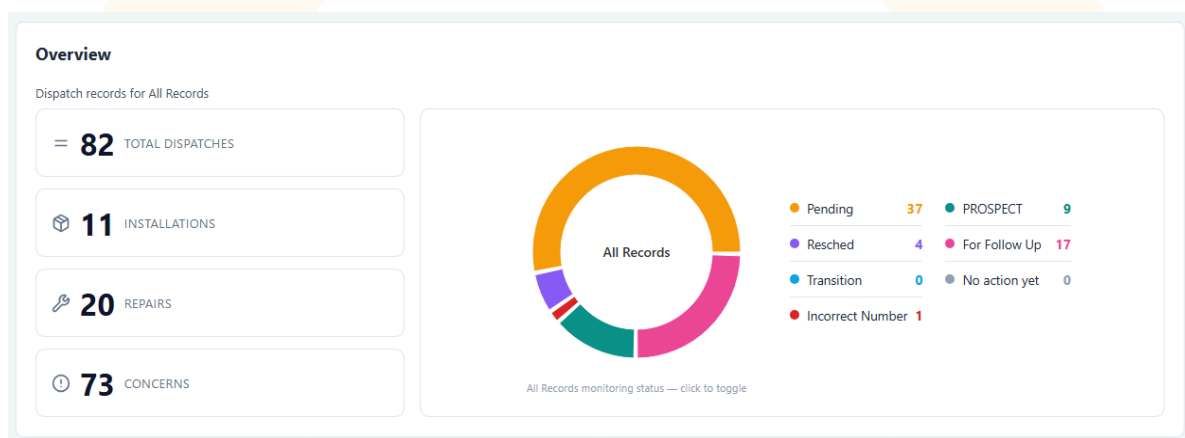

Note: These cards pull from the **monitoring records** (Internet Install, Signal Play, Client Concerns), except "Closed" and "Cancelled", which come from the Dispatch Log once a record is marked Done or Cancelled.

Card	What It Shows	Uses Date Filter?
For Dispatch	Records not yet started , with an Install / Repair breakdown shown underneath	No (always current)
Ongoing	Records started but not finished , with an Install / Repair breakdown shown underneath	No (always current)

Closed	Dispatches marked "Done" . Label reads "Total Closed" when no date filter is applied, or "Closed (this period)" when filtered	Yes (by completion date)
Cancelled	Dispatches marked "Cancelled" . Label reads "Total Cancelled" or "Cancelled (this period)" the same way	Yes (by completion date)

2. Overview (KPI Cards + Pie / Donut Chart)

KPI cards (stacked on the left)

Note: These 4 cards pull from the **Dispatch Logs**, not the monitoring pages. They're filtered by Created At date, and by type:

- **Total Dispatches** — every dispatch, any type
- **Installations** — dispatches marked type "Installation"
- **Repairs** — dispatches marked type "Repair"
- **Concerns** — dispatches marked chat type "Concern"

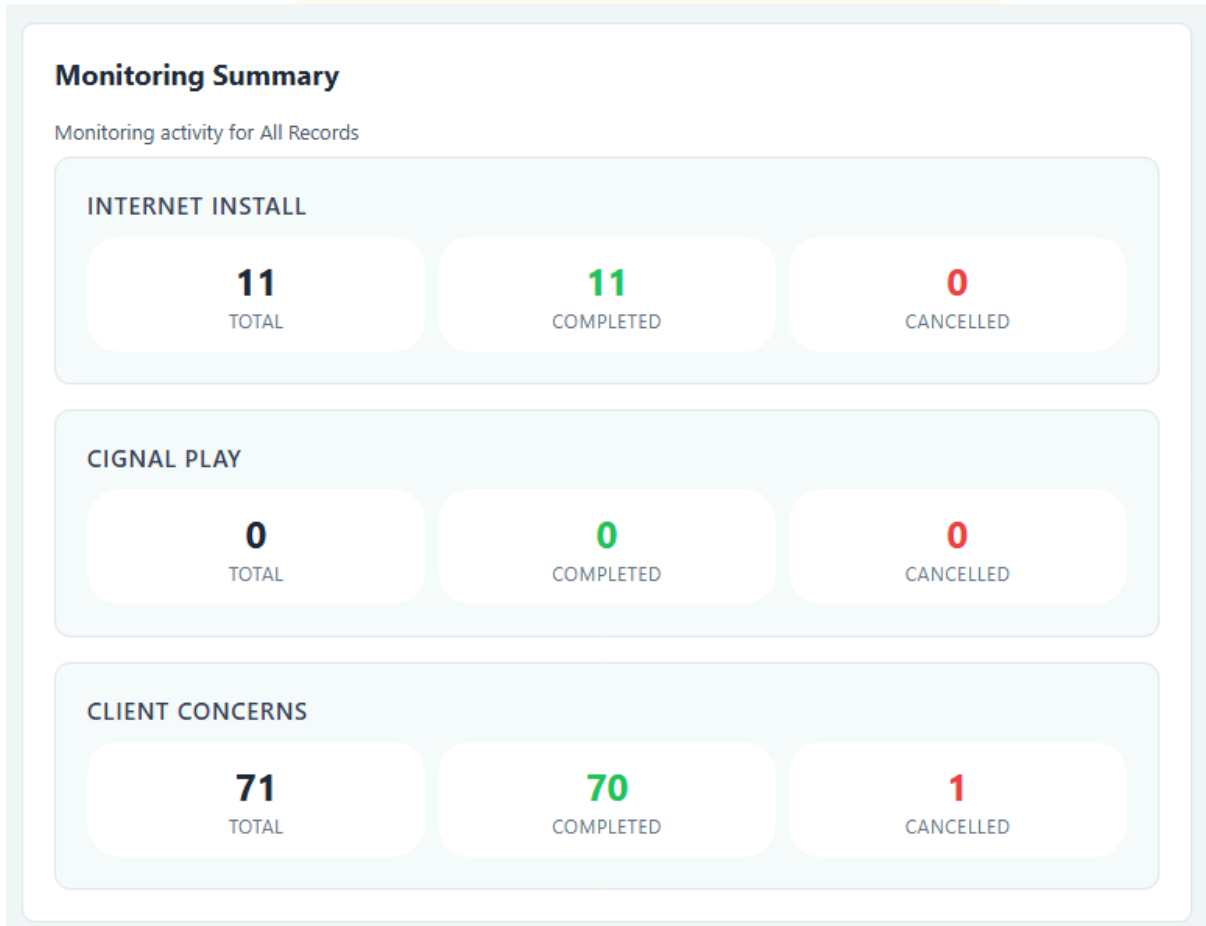

This is different from the "For Dispatch" and "Ongoing" cards above, which come from the monitoring pages and only show current pending/in-progress work.

Pie / Donut Chart (right side): Shows the distribution of **monitoring records** by status (e.g., Rescheduled, For Follow-Up), filtered by Created At. Each status is shown in its configured color with a count label, and the center of the donut displays the currently selected view name.

Click the chart to toggle between views, cycling in this order:

- **All Records** – Combined view of all sources
- **Internet Install** – Internet installation records only
- **Signal Play** – Signal Play records only
- **Client Concerns** – Client concern records only

3. Monitoring Summary

Shows three cards (Internet Install, Signal Play, Client Concerns), filtered by Completed At, with:

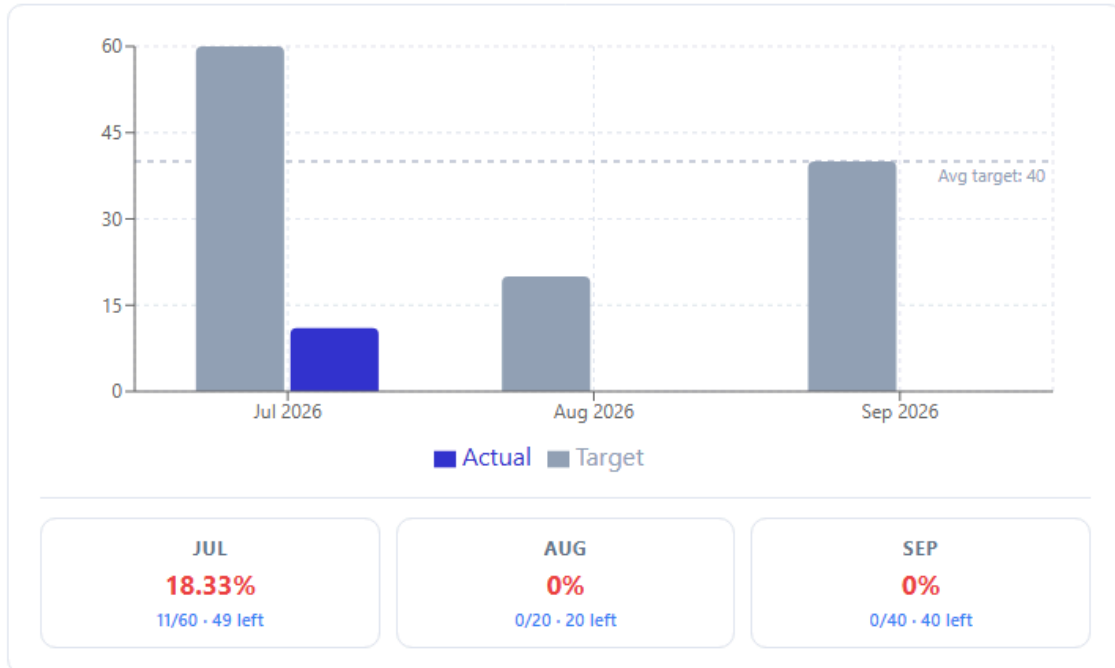

- **Total** – Completed + Cancelled records for that tab in the selected period (not all records in the tab – records still pending/in-progress are not counted here)
- **Completed** – Records with linked Dispatch status "Done"
- **Cancelled** – Records with linked Dispatch status "Cancelled"

4. Monthly Install Targets (Bar Chart)

Monthly Install Targets

No targets configured for this period. Set them under Management → Target Installment.

Monthly Install Targets

Compares **Target vs Actual** installations per month, for months that overlap the selected date range:

- **Gray bar** — Target set by admin (Management → Target Installment)
- **Blue bar** — Actual completed installations (dispatches with type "Installation" and status "Done", counted by completion date within that calendar month)
- A dashed reference line marks the average target across the displayed months
- Below the chart, a row of mini-cards per month shows the percentage reached, the actual/target figures, and either "done" or the number remaining — cards turn green once a month hits 100%

5. Technicals (By Staff / By Team)

This is now a single section with a toggle to switch between By Staff and By Team views. Only counts dispatches with "Installation" or "Repair" type that have been **completed** (filtered by completion date).

Technicals — By Staff								
Dispatch activity for All Records								
Rank	Technician	Installs	Repairs	Total	Target/Day	Target/Month	% of Product	Per Day (avg)
1		1	9	10	5	100	10%	0.38
2		0	8	8	5	100	8%	0.31
3		1	4	5	5	100	5%	0.19
4		3	2	5	5	100	5%	0.19

By Staff:

Column	Calculation
Installs	Count of dispatches with type "Installation" assigned to this technician
Repairs	Count of dispatches with type "Repair" assigned to this technician
Total	Installs + Repairs
Target/Day	Technician's daily target (from Technician settings)
Target/Month	Technician's monthly target (from Technician settings)
% of Product	$\text{Total} \div (\text{Target/Month} \times \text{Number of Months}) \times 100$
Per Day (avg)	$\text{Total} \div (\text{Number of Months} \times 26)$

By Team: same metrics, aggregated per team (no rank badge). For each team, it counts every completed Installation and Repair dispatch assigned to any of its members. The team's targets are the sum of all members' individual targets. Columns: Team, Members, Installs, Repairs, Total, Target/Day, Target/Month, % of Product, Per Day (avg).

6. Admin Stats Table

Shows CSR (Customer Service Representative) performance based on dispatch records assigned to them in the Dispatch Log.

Admin Stats

CSR activity for All Records

Rank	CSR	Assigned	Dispatch Handled	Dispatch Closed	Close Rate	Concerns Handled	Concerns Closed	Concern Close Rate
1	[REDACTED]	5	2	1	100%	2	2	100%
2	[REDACTED]	0	0	0	0%	0	0	0%
3	[REDACTED]	0	0	0	0%	0	0	0%
4	[REDACTED]	0	0	0	0%	0	0	0%
5	[REDACTED]	0	0	0	0%	0	0	0%

Metric	What It Counts	Date Filter
Assigned	All dispatch records + active monitoring records assigned to this CSR (any type)	Created At
Dispatch Handled	"Installation" and "Repair" dispatches + active monitoring records, excluding "Concerns"	Created At
Dispatch Closed	Dispatch logs only, for "Installation" and "Repair" types, marked as "Done"	Completed At
Dispatch Close Rate	$(\text{Dispatch Closed} \div (\text{Dispatch Handled} - \text{Cancelled})) \times 100$	-
Concerns Handled	"Concern" type dispatches + active monitoring records	Created At
Concerns Closed	Dispatch logs only, for "Concern" type dispatches, marked as "Done"	Completed At
Concern Close Rate	$(\text{Dispatch Closed} \div (\text{Dispatch Handled} - \text{Cancelled})) \times 100$	-

Close rates are color-coded: $\geq 70\%$ green, 40–69% yellow, $< 40\%$ red.

CSR stats combine two sources:

1. **Dispatch records** — entries in the Dispatch Log
2. **Active monitoring records** — Monitoring records that do NOT yet have a linked dispatch (still in the monitoring pipeline)

How Dispatches Are Classified

A dispatch record has two key fields:

- **type_id** — The work type (Installation, Repair, etc.)
- **chat_type_id** — The nature of the interaction (Inquiry, Concern, etc.)

Concerns take priority. If a dispatch has type_id = Installation but chat_type_id = Concern, it is counted under Concerns Handled, not Dispatch Handled. This prevents double-counting and ensures each dispatch appears in only one metric.

type_id	chat_type_id	Counted As
Installation	Inquiry	Dispatch Handled
Repair	Inquiry	Dispatch Handled
Installation	Concern	Concerns Handled
Repair	Concern	Concerns Handled
Others	Inquiry	Assigned only (not in Dispatch Handled)

Additional Improvement: Cancelled Dispatches

Customer-initiated cancellations are now excluded from the close rate denominator. If a CSR handles 10 dispatches, completes 8, and 2 are cancelled by the customer:

- Without exclusion: $8 / 10 = 80\%$ (penalized for something outside their control)
- With exclusion: $8 / (10 - 2) = 100\%$ (fair — reflects actual work completed)

4. Monitoring Pages

There are three monitoring pages: **Internet Install**, **Signal Play**, and **Client Concerns**. Each tracks its own type of job through the same basic workflow.

Each page has two tabs — **Pending** (not yet dispatched) and **Ongoing** (currently being worked on), each with a count badge.

What You Can Do

- **Create** a new record with client, location, scheduling, and job details
- **Edit** an existing record
- **Copy** a record's details to your clipboard using the copy icon 
- **Dispatch a pending record** — assign technicians and set a start time, which moves it to Ongoing 

- **Mark as Done** — fill out a completion form with service details, then confirm with the slide-to-submit bar; this creates a Dispatch Log entry 
- **Cancel a record** with a reason, which also logs it to the Dispatch Log 
- **Undispatch** — double-click an Ongoing record to move it back to Pending 
- **Delete a record** (Super Admin only, requires typing the client name to confirm)

Additional features:

- **Customer Autofill** — Typing an existing customer name displays a suggestion. Select it to automatically fill the form with the customer's saved information.
- **Duplicate Prevention** — If you enter an existing customer name without selecting the suggestion, the name field turns red and the record cannot be saved, preventing duplicate customer entries.

The three pages are nearly identical, with small differences in labels and a couple of extra fields (e.g., Client Concerns has a Ticket No. field and hides the Sales Agent field).

5. Dispatch Log

Dispatch Log					
Sort: Date Created				Export	
All Records	All Types	All Sources	More Filters	Client	
Status	Date Created	Date Completed	Turnaround	Client	Concern
Done	7/25/2026, 12:37 AM	7/26/2026, 12:38 AM	1d 1m	qweqwe	
Done	7/25/2026, 12:36 AM	7/26/2026, 12:37 AM	1d 2m	wqeqwe	
Done	7/22/2026, 3:53 PM	7/22/2026, 3:55 PM	2m		Red LOS
Done	7/22/2026, 3:49 PM	7/22/2026, 3:52 PM	4m		
Done	7/22/2026, 3:48 PM	7/22/2026, 3:52 PM	5m		Red LOS

The Dispatch Log shows all dispatched records from every source (**Internet Install, Signal Play, Client Concerns**) in one combined table.

What You Can Do

- View all dispatches and their current status
- Filter by date, type, source, CSR, status, team, and more (basic filters visible up front, more advanced ones under "More Filters")
- Search by client name, address, job details, or ticket number

- View and edit dispatch details
- Delete dispatches (Super Admin only)
- Export filtered results to CSV or Excel by month

Click any row to open the full record and edit its details, including job info, subscriber info, location, scheduling, service details, and assigned technicians.

6. Customers

The Customers page lists everyone in your customer base.

Installation: 2

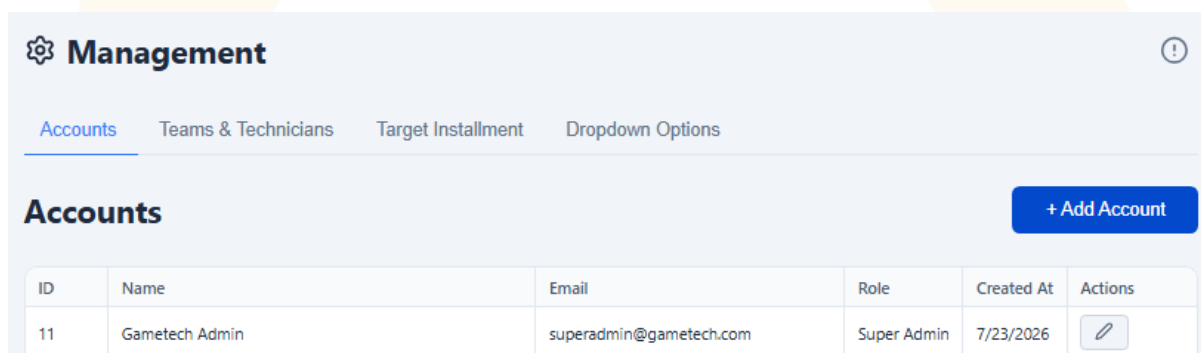

Job History

Date Created	Date Completed	Turnaround	Module	Type	Status	Concern	Ticket #
7/25/2026, 1:12 AM	7/26/2026, 1:13 AM	1d 1m	Dispatch Log	Installation	Done		-
7/25/2026, 1:11 AM	-	-	Signal Play	Installation	Pending		-

What You Can Do

- Search and sort the customer list (A-Z or Newest)
- Add a new customer (name, address with map picker, contact, account number, email)
- Click a customer's name to open their dashboard, which shows their contact info, a summary of their jobs by status and type, and a full job history table
- Edit customer info from their dashboard
- Delete a customer (Super Admin only, requires typing the name to confirm)

7. Management

The Management page has four tabs:

Tab	What You Can Manage
Accounts	Create, edit, or delete CSR / Super Admin accounts (Super Admin only)
Teams & Technicians	Manage teams, technicians, targets, and assignments
Target Installment	Set monthly installation targets
Dropdown Options	Configure the labels and colors used for statuses, types, and chat types throughout the system

Each tab follows the same basic pattern: a table of existing records, an "Add" button to create new ones, and Edit/Delete actions on each row (deletions typically require typing a confirmation).

8. Audit Log

Audit Log					Export
All Records	All actions	All record types	All users	Search summary or Customer	
When	Action	Record	Performed by	Summary	
7/26/2026, 1:35:33 AM	CREATE	MonitoringRecord #158	ROGELIO AMARILLE	Created SIGNAL_PLAY record for	
7/26/2026, 1:34:22 AM	UPDATE	CSR #10	ROGELIO AMARILLE	Updated account glenn marky	
7/26/2026, 1:16:20 AM	DELETE	Dispatch #87	ROGELIO AMARILLE	Deleted dispatch for test 1	
7/26/2026, 1:14:00 AM	UPDATE	Customer #155	glenn marky	Updated customer test 1	
7/26/2026, 1:13:00 AM	UPDATE	MonitoringRecord #157	glenn marky	Marked INTERNET_INSTALL recor	

The Audit Log **records important actions** across the system — account, customer, technician, team, dispatch, monitoring record, and configuration changes — and updates in real time as they happen.

You can filter by date, action type (Create/Update/Delete), record type, and who performed the action, and export filtered results to CSV or Excel by month. Click the expand arrow on any entry to see exactly what changed, in either a readable "clean" view or raw JSON.

7/26/2026, 1:34:22 AM	UPDATE	CSR #10	ROGELIO AMARILLE	Updated account glenn marky
Name glen → glenn marky				
7/26/2026, 1:34:22 AM	UPDATE	CSR #10	ROGELIO AMARILLE	Updated account glenn marky
BEFORE		AFTER		
<pre>{ "name": "glen", "email": "glennmarkanino@gmail.com" }</pre>		<pre>{ "name": "glenn marky", "email": "glennmarkanino@gmail.com" }</pre>		

9. Backup (Super Admin Only)

The Backups page lets you **manage database backups**, view backup history, and trigger a manual full backup at any time. Hourly backups run automatically, and a safety backup is created automatically before any restore.

You can download any backup file, or restore from one (which requires your Super Admin password and will overwrite all current data — this cannot be undone).

10. FAQ

Why can't I access the Dispatch website?

Make sure the website link uses the correct IP address and port number, and that it starts with http:// (not https://). Also, ensure your device is connected to the same Wi-Fi network as the server hosting the Dispatch system.

The Dashboard numbers seem wrong

Check the Date Range Picker at the top — some numbers use the date filter, others always show current state. See the Dashboard section for details on which fields each part uses.

Why is the "For Dispatch" number different from what I expect?

"For Dispatch" always shows the current state (records not yet started), regardless of the date filter.

Why can't I delete a record?

Only Super Admin users can permanently delete records. CSR Admins can edit and cancel records but not delete them. If you entered a record by mistake, ask a Super Admin to remove it.

Why are there no records showing in my Dispatch Log or Monitoring Records?

You may have an active filter or text search applied. Clear the filters or the search field to display all matching records.

If you encounter issues, contact your system administrator.

End of User Manual
